## TRETORN X

A pressureless tennis ball, but one that uses Micro Cellular technology. The Micro X Balls have the best reputation for Coaching or Ball Machine usage. These balls offer great consistency and playability.

The Tretorn Micro Cellular Technology is patented worldwide and is classified in a new category of tennis balls called "micro cell." A conventional ball when hit flattens on the strings and resistance is provided by the compressed air within the ball. Every time the ball is hit small amounts of air escapes. In these Tretorn Micro X balls, the resistance is provided by 700 million air-filled micro cells that cannot escape through the ball's rubber core.

### FEATURES

Each Micro X ball is surfaced with Tretorn's exclusive Flex-Felt, which provides superior playability and wear resistance. Flexibility is critical in protecting the soft rubber core.
